

# BICSI INSTALLER 2: COPPER TRAINING

EXPAND YOUR KNOWLEDGE AND DEVELOP YOUR SKILLS IN COPPER CABLING INSTALLATION.

## class information

This course sets the foundation of copper-based structured cabling system installation. The course begins with an overview of copper transmission principles, professionalism, life safety and general industry best practices, as related to copper. A significant amount of course time will then be spent on BICSI best practices for the installation, termination, testing and retro fitting of copper cable. Additional topics covered will include BICSI best practices for pathways and spaces; grounding, bonding and protection, and firestopping.

## details

November 8 - 12

5 Day Course | BICSI CECs: 35

## experience

One or more years of current and verifiable ICT industry installation experience.

## who should attend?

Cabling installers who wish to expand their knowledge of the industry, learn new copper installation skills and continue to advance professionally.

## knowledge & skills

Must be able to distinguish between different colors and possess manual dexterity to complete fine motor tasks. Topics taught in class build upon what is taught in IN101.

## course materials

Students must bring the printed version of the "Information Technology Systems Installation Methods Manual (ITSIMM)" to class. The manual will be included and available for pickup after immediately after registration.
